

Concept and Overall Spatial Structure

What does the proposal introduce?

FIGURE 01 / BORROWED INTELLIGENCE

Overall Spatial Structure | One Spine · Two Wings · Three Commons

Jing-Zhang is not an isolated north - south landscape axis: its spine and east - west everyday links form civic infrastructure together.

SPATIAL ORGANIZATION

ONE SPINE

Jing-Zhang Memory - Wellbeing Symbiosis Spine

TWO WINGS

Zhongguancun Technology Services Wing
Xiaoyue River Scenario Enablement Wing

THREE COMMONS

Test · Origin Living · Slow Intelligence

THREE DISTINCT LAYERS

Spatial organization	One Spine · Two Wings · Three Commons
Evaluation / governance	Memory · Time · Comfort · Trust Ledgers
Scenario / service layer	S01 - S12 Twelve Scenarios

LEGEND / AUTHORITY

Official upstream provisional	dashed
Participant-controlled design	solid
FIELD_VERIFY / MANAGEMENT_VERIFY	pending verification

数据 / Data: site_boundary · key_areas · public_space · roads · green_space | Sources: DATA-SRC-PROVISIONAL-BOUNDARIES-20260605; PARTICIPANT-GEOMETRY-V1

PROVISIONAL · confidence low · non-statutory

Jing-Zhang cannot remain a north-south landscape axis. Six east-west everyday-life seams must turn the main spine into civic infrastructure for public life.

43.6 km²

Coordinated Research
Industry, talent, space, and governance

11.4 km²

Overall Design
Renewal, land use, mobility, blue-green systems, and public space

3

Key Areas
Intelligence Test, Origin Living, and Slow Intelligence Urban Commons

One Spine

Jing-Zhang Memory-Wellbeing Symbiosis Spine

Two Wings

Technology Services / Xiaoyue Scenario Enablement

Three Commons

Responsibility / Daily life / Human pace

Six Seams

East-west links support the north-south spine

Heritage, Urban Renewal, and Spatial Delivery

How does the concept become urban space?

FIGURE 02 / BORROWED INTELLIGENCE

Land Use and Urban Spatial Structure

Move from single-purpose industry zoning to a mixed urban structure of innovation, daily life, public space, and ecological ground.

Borrow History

Use real railway, industrial, and everyday memory to calibrate narrative; imitation does not replace evidence.

Borrow Nature

Make Qinghe, Xiaoyuehe, sun, shade, and stormwater part of everyday comfort.

Borrow Daily Life

Test space through commuting, care, rest, consumption, and accessibility.

Borrow Collective Intelligence

Let the public, developers, operators, and managers define problems, verification, and exit together.

Innovative Production

Research, professional services, and controlled validation

Daily Life

Care, rest, consumption, and talent services

Public Space

The Spine, everyday seams, public ground floors, and shared courts

Ecological Ground

Blue-green links, shade, sunlight, and stormwater

Retain authentic fabric | repair conditions of use | adapt functions | insert essential public components | replace only unsafe or unworkable elements

Mobility, Blue-Green, and Wellbeing Network

Where does everyday life improve?

FIGURE 04 / BORROWED INTELLIGENCE

Time Equity | Walking · Blue-Green · Wellbeing Network

Infrastructure shifts from a machine of separation to a wellbeing network that reduces time burdens and improves comfort.

数据 / Data: roads · green_space · public_space · constraints | No unverified time-saving number is shown

TIME EQUITY: THREE REPRESENTATIVE PATHS

X01 Qinghe Blue-Green Cross

PROBLEM	ACTION	OUTCOME
Fragmented river edges	Shade + stormwater + staying	Continuous rest and transfer choice

AI Origin Two Gates

PROBLEM	ACTION	OUTCOME
Uncertain access information	Fixed signs + human help	Route choice without a phone

Dazhongsi Four Quadrants

PROBLEM	ACTION	OUTCOME
Road and rail separation	Conceptual links + public ground	Reduce detour; verification pending

SEASONAL COMFORT

Winter sunlight + continuous summer shade + routes that recover after rain

VERIFICATION STATUS

FIELD_VERIFY: walking / accessibility / actual open routes / nighttime use
MANAGEMENT_VERIFY: access control / hours / shared courts / willingness to open

FIELD_VERIFY · MANAGEMENT_VERIFY · low confidence

Infrastructure shifts from a machine of severance to a wellbeing network that reduces time burdens and improves comfort.

Detours

Crossings and access control increase everyday time burdens

Severance

Rail, roads, waterways, and compounds overlap

Heat Exposure

Continuous shade and stopping nodes are missing

Noise

Traffic and equipment affect walking and rest

Exclusion

Permissions, information, and ability conditions are unclear

Time Cost

Distance and waiting affect users unequally

FIELD_VERIFY: continuous walking / accessibility continuity / actually open routes / nighttime use

MANAGEMENT_VERIFY: access control / opening hours / shared courts / public ground floors / willingness to open / operating entity / maintenance responsibility

Low-tech baseline: fixed wayfinding, printed information, staffed service, ordinary checkout, continuous seating, and basic accessibility remain available.

Three Commons, Seven User Groups, and Twelve Scenes

How are the three key areas designed differently?

FIGURE 03 / BORROWED INTELLIGENCE

Three Commons | Three Urban Prototypes

The Three Commons are not copies of one AI park: they test responsibility, everyday life, and human pace respectively.

数据 / Data: key_areas · public_space · buildings · roads · green_space · constraints | Three equal templates; geometry-derived mini maps

conceptual · provisional · participant-controlled

Intelligence Test Commons

Can technology enter the city responsibly?
Research → Controlled Test → Public Display → Deliberation / Standards

Origin Living Commons

How does innovation enter everyday life?
Two Gates → One Seam → Courtyards → Four Interfaces

Slow Intelligence Urban Commons

How can AI-enabled consumption preserve human pace and choice?
Four Quadrants → Public Ground → Slow Stay → Content / Global Exchange

U01-U07

- U01 Older residents and carers
- U02 Children, students, and families
- U03 Researchers, developers, and start-up teams
- U04 Commuters, service workers, and night shifts
- U05 Heritage and international visitors
- U06 Users with different abilities and sensory needs
- U07 Businesses, community organizations, and operators

S01-S12

- S01 Century Memory Lens | S02 Quiet Borrowed-View Path | S03 Four-Season Comfort Route | S04 Accessible Together | S05 Time-Equity Navigation | S06 Public-Space Steward | S07 Blue-Green Urban Twin | S08 Community Deliberation Agent | S09 Open Validation Booking | S10 Slow-Intelligence Retail Assistant | S11 Innovation Resource Foyer | S12 Public Wellbeing Ledger

T1-T3

- T1 Edge Public-Service Testbed
- T2 Accessibility and Operations Testbed
- T3 Slow-Intelligence Retail and Content Testbed

AI / non-AI

- Non-AI baseline + AI augmentation + human fallback / exit

Metrics, AI Governance, Delivery, and Risk

Why is it credible, how is it delivered, and what remains uncertain?

site_area_sqm

11,412,825.386 m2

confidence = low

green_ratio

14.2101%

confidence = low / design-model / non-statutory

public_space_ratio

10.0829%

confidence = low / conceptual / non-statutory

Memory Ledger

Authenticity / traceability

Time Ledger

Walking / waiting / service burdens

Comfort Ledger

Sun / shade / rest / accessibility

Trust Ledger

Data / responsibility / appeal / exit

Public Value Gate

Does it improve public benefit?

Spatial Fit Gate

Does it fit the specific place?

Trust and Safety Gate

Is it explainable and contestable?

Operations and Exit Gate

Are responsibility and stopping mechanisms defined?

PROVISIONAL LOCATION | PROV-KEY-003 | Issue #1029 = Open | official_anchor_status = pending | official validation geometry ≠ real design-research location

Remain unknown / null: floor_area_ratio | building_height_m | development_capacity_sqm | statutory_building_density

Phase 0 | Data and Consensus

Scope, sources, responsibility, and verification plan are traceable

Phase 1 | Low-Cost Wellbeing Repair

Non-AI basic services work first

Phase 2 | Three Commons and AI Pilots

All Four Admission Gates pass

Phase 3 | Network and Identity

Long-term budgets, operators, public performance, and retirement mechanisms exist

FIELD_VERIFY: continuous walking / accessibility continuity / actually open routes / nighttime use

MANAGEMENT_VERIFY: access control / opening hours / shared courts / public ground floors / willingness to open / operating entity / maintenance responsibility

Industry support and regional interfaces

Who supplies, where is it validated, how is feedback returned, and when does it stop?

Eight elements: supply, validation, feedback and exit

Participant concept • No confirmed partners, resources or permissions • Not a geographic map

Resource supply → Risk-based validation → Four Ledgers feedback → Provider adjustment

Exit: withdrawn permission, false access, discrimination, absent takeover or upkeep → Stop AI, restore low-tech service, record reason

Regional interfaces: send issues, return evidence

Participant concept • No confirmed partners, resources or permissions • Not a geographic map

Each of the eight elements requires a spatial carrier, prospective responsibility and exit rules. Land and space govern admission; industry and talent organise collaboration; capital and compute constrain operation; data and scenarios provide feedback. All actors are suggested roles, with no confirmed funding, quotas or policy support. Indicators below are future verification items requiring baselines, not achieved performance.

Six global cases and Jing-Zhang translation

Primary sources support mechanism comparison; Jing-Zhang applications require fresh local admission.

C01 Kendall Square / MIT, USA

MIT’ s resource map lists campus mentoring, licensing and entrepreneurship resources alongside off-campus incubation and shared-laboratory resources. This is a directory, not evidence of collaboration outcomes.

- Institution interface: campus and off-campus resource directory.
- Shared facilities: LabCentral is listed; access terms were not verified.
- Talent daily life: mentoring and venture support are listed; wellbeing outcomes are unproven.
- Scenario access: the source supplies no public-space testing permission.
- Community participation: representative public involvement is not documented here.
- Failure and exit: exit agreements are not documented here.

Jing-Zhang proposal: Use AI Origin’ s two gates as a single resource foyer, with staffed directories of university services, advice and bookable facilities; providers would maintain access rules and hours.

Do not copy institutional density, financing or access rights; a directory does not establish resource availability in Jing-Zhang.

CASE-MIT-KENDALL / sources.json / 2026-10-05

C02 one-north / LaunchPad, Singapore

JTC describes a development bringing together startups, incubators, accelerators and investors, with modular space, amenities and opportunities to pilot across its property portfolio.

- Institution interface: eligibility is defined by participant type.
- Shared facilities: modular units; access is not automatically free or unrestricted.
- Talent daily life: food and transport information accompanies workspace information.
- Scenario access: portfolio-wide piloting opportunities still require project admission.
- Community participation: resident co-decision is not established by this page.
- Failure and exit: flexible leases are described; test-failure rules are not documented.

Jing-Zhang proposal: Provide adaptable small work units and controlled test courts at Zhongzhiyuan, with daily services at AI Origin. The foyer would disclose booking, duration, charges and suspension terms.

Do not transplant Singapore’ s rent, subsidy or eligibility regime; verify premises, fire safety, responsibilities and community acceptance locally.

CASE-JTC-LAUNCHPAD / sources.json / 2026-10-05

C03 Paris-Saclay, France

The public development agency presents campus development, economic activity, cultural life, IPHE business space and shared services within one coordinated development framework.

- Institution interface: a public developer coordinates campus and territorial development.
- Shared facilities: IPHE and shared university facilities are described.
- Talent daily life: cultural life and shared mobility are included.
- Scenario access: innovation services are described, without transferable blanket permission.
- Community participation: the page describes development consultation with local authorities and residents.
- Failure and exit: scenario-specific retirement thresholds are not documented.

Jing-Zhang proposal: Use a common issue register and coordination ledger across the Three Commons, reviewing mobility and daily services alongside research space. Agreements would define each shared interface.

Do not copy the French agency’ s land powers or financing; verify existing Jing-Zhang ownership and management separately.

CASE-EPA-SACLAY / sources.json / 2026-10-05

C04 Toronto MaRS, Canada

MaRS combines innovation workspace, meeting and event venues, and commercialization advice, and describes adaptation of a former hospital heritage building for innovation workspace.

- Institution interface: workspace connects with investor interaction and advice.
- Shared facilities: meeting and event venues; eligibility and pricing require further checks.
- Talent daily life: an urban work and meeting setting; universal affordability is not established.
- Scenario access: this page promises no public testbed.
- Community participation: resident veto rights are not established here.
- Failure and exit: service-removal agreements are not documented here.

Jing-Zhang proposal: Use accessible ground floors of existing buildings in the technology-services wing for advice, display and short meetings; retain authentic interpretation at Dazhongsi and make additions removable.

Do not equate adaptation with permission to alter buildings; structure, fire safety, ownership and heritage require review.

CASE-MARS-HUBS / sources.json / 2026-10-05

C05 London Knowledge Quarter, UK

KQ links academic, cultural, research and technology organisations through a partnership and publishes its governance and knowledge-exchange aims, organising proximity into an exchange network.

- Institution interface: partnership, board and member representation.
- Shared facilities: members hold diverse resources; membership creates no universal access right.
- Talent daily life: exchange network; no living-cost outcome evidence here.
- Scenario access: knowledge exchange is not permission for real-data tests.
- Community participation: visitors and local users are included in aims; representation needs verification.
- Failure and exit: project-stopping thresholds are not documented here.

Jing-Zhang proposal: Create a small partnership forum linking the technology-services wing and spine, with deliberation tables showing institutional resources and community issues. Membership would confer no control over public space.

Partnership discussion cannot replace public procedures; member counts and brand exposure cannot substitute for public outcomes.

CASE-KQ-LONDON / sources.json / 2026-10-05

C06 Pittsburgh / Hazelwood Green, USA

CMU describes advanced-manufacturing research in Mill 19 inside a former steel-mill shell and plans for robotics facilities, with sustainability, equity and community-opportunity aims. These aims are not verified outcomes.

- Institution interface: university, manufacturing research and industry collaboration.
- Shared facilities: research infrastructure; public-access terms were not verified.
- Talent daily life: housing and daily convenience are not quantified here.
- Scenario access: translational research space, without blanket public-testing rights.
- Community participation: equitable opportunity is an aim; implementation representation is unverified.
- Failure and exit: project-specific exit rules are not supplied.

Jing-Zhang proposal: Separate research cores, controlled test courts and public observation at Zhongzhiyuan. Prefer adaptation where existing premises permit it, starting T1/T2 with small removable components.

This is not geographical evidence for Robotics Row: this revision narrows the case to sourced Hazelwood evidence, without copying investment or land arrangements.

CASE-CMU-HAZELWOOD / sources.json / 2026-10-05
