CENTENNIAL JING-ZHANG / CITY MEMORY / HUMAN WELLBEING / RESPONSIBLE AI

P02

Project Summary and Core Judgment

Centennial Jing-Zhang preserves engineering and everyday memory while railways, roads, compounds, and large blocks continue to divide space. The proposal treats AI not as an exhibit but as part of verifiable civic infrastructure organized around memory, walking, comfort, choice, and exit.

Jing-Zhang cannot remain a north-south landscape axis. Six east-west everyday-life seams must turn the main spine into civic infrastructure for public life.

Why

Repair detours, heat exposure, noise, exclusion, and time burdens created by infrastructure.

What

One Spine, Two Wings, Three Commons; Four Ledgers; Twelve Scenes; Four AI Admission Gates.

Change

Shift from technology display to everyday service that is accessible, caring, deliberative, and verifiable.

P03

Task, Three Scales, and Data Boundaries

official / provisional / participant-controlled

PROVISIONAL LOCATION | PROV-KEY-003 | Issue #1029 = Open | official_anchor_status = pending | official validation geometry ≠ real design-research location

P04

Why Borrowed Intelligence

Borrowing is an urban-design method, not a visual metaphor.

Borrow History

Use real railway, industrial, and everyday memory to calibrate narrative; imitation does not replace evidence.

Borrow Nature

Make Qinghe, Xiaoyuehe, sun, shade, and stormwater part of everyday comfort.

Borrow Daily Life

Test space through commuting, care, rest, consumption, and accessibility.

Borrow Collective Intelligence

Let the public, developers, operators, and managers define problems, verification, and exit together.

Identify real objects → expose infrastructure burdens → build cross-boundary relations → provide everyday service → recalibrate with evidence

P05

Overall Spatial Structure

Jing-Zhang cannot remain a north-south landscape axis. Six east-west everyday-life seams must turn the main spine into civic infrastructure for public life.

FIGURE 01 / BORROWED INTELLIGENCE

Overall Spatial Structure | One Spine · Two Wings · Three Commons

Jing-Zhang is not an isolated north - south landscape axis: its spine and east - west everyday links form civic infrastructure together.

SPATIAL ORGANIZATION

ONE SPINE
Jing-Zhang Memory - Wellbeing Symbiosis Spine

TWO WINGS
Zhongguancun Technology Services Wing
Xiaoyue River Scenario Enablement Wing

THREE COMMONS
Test · Origin Living · Slow Intelligence

THREE DISTINCT LAYERS

Spatial organization	One Spine · Two Wings · Three Commons
Evaluation / governance	Memory · Time · Comfort · Trust Ledgers
Scenario / service layer	S01 - S12 Twelve Scenarios

LEGEND / AUTHORITY

Official upstream provisional	dashed
Participant-controlled design	solid
FIELD_VERIFY / MANAGEMENT_VERIFY	pending verification

数据 / Data: site_boundary · key_areas · public_space · roads · green_space | Sources: DATA-SRC-PROVISIONAL-BOUNDARIES-20260605; PARTICIPANT-GEOMETRY-V1

PROVISIONAL · confidence low · non-statutory

One Spine, Two Wings, Three Commons organize space; Four Ledgers govern evaluation; Twelve Scenes provide services.

P06

Urban Renewal and Land-Use Structure

Retain authentic fabric | repair conditions of use | adapt functions | insert essential public components | replace only unsafe or unworkable elements

FIGURE 02 / BORROWED INTELLIGENCE

Land Use and Urban Spatial Structure

Move from single-purpose industry zoning to a mixed urban structure of innovation, daily life, public space, and ecological ground.

LAND-USE SEMANTICS / NON-STATUTORY	
Innovation production and testing	0802
Daily and community services	0702
Public space and interfaces	1403
Culture, deliberation, and content	0803
Blue-green ecological ground	1401
Mixed services and slow retail	09
Uncommitted non-key-area model	16

THREE SPATIAL PROTOTYPES

Intelligence Test Commons

Research → Test → Display → Deliberate

Origin Living Commons

Two Gates → One Seam → Courtyards → 4 Interfaces

Slow Intelligence Urban Commons

4 Quadrants → Public Ground → Slow Retail

STATUTORY CONTROL STATUS

FAR · Building Height · Development Capacity · Statutory Building Density
= unknown / null

Building forms are participant-controlled conceptual prototypes, not approved schemes.

A compound urban structure covers the provisional site boundary; AI scenarios are not statutory land-use classes.

P07

Heritage, Infrastructure, and Wellbeing

Infrastructure shifts from a machine of severance to a wellbeing network that reduces time burdens and improves comfort.

Walking, Blue-Green, and Wellbeing Network

Infrastructure shifts from a machine of severance to a wellbeing network that reduces time burdens and improves comfort.

FIGURE 04 / BORROWED INTELLIGENCE

Time Equity | Walking · Blue-Green · Wellbeing Network

Infrastructure shifts from a machine of separation to a wellbeing network that reduces time burdens and improves comfort.

数据 / Data: roads · green_space · public_space · constraints | No unverified time-saving number is shown

TIME EQUITY: THREE REPRESENTATIVE PATHS

X01 Qinghe Blue-Green Cross

PROBLEM	ACTION	OUTCOME
Fragmented river edges	Shade + stormwater + staying	Continuous rest and transfer choice

AI Origin Two Gates

PROBLEM	ACTION	OUTCOME
Uncertain access information	Fixed signs + human help	Route choice without a phone

Dazhongsi Four Quadrants

PROBLEM	ACTION	OUTCOME
Road and rail separation	Conceptual links + public ground	Reduce detour; verification pending

SEASONAL COMFORT

Winter sunlight + continuous summer shade + routes that recover after rain

VERIFICATION STATUS

FIELD_VERIFY: walking / accessibility / actual open routes / nighttime use
MANAGEMENT_VERIFY: access control / hours / shared courts / willingness to open

FIELD_VERIFY · MANAGEMENT_VERIFY · low confidence

Every pending route remains FIELD_VERIFY / MANAGEMENT_VERIFY and is not shown as built infrastructure.

P09

Comparing the Three Commons

Equal visual weight / same comparison template

FIGURE 03 / BORROWED INTELLIGENCE

Three Commons | Three Urban Prototypes

The Three Commons are not copies of one AI park: they test responsibility, everyday life, and human pace respectively.

P10

Intelligence Test Commons

Can technology enter the city responsibly?

Research → Controlled Test → Public Display → Deliberation / Standards

Non-AI baseline

Printed rules + staffed service

AI augmentation

Edge service + public testing protocol

First action

Verify the compound - Qinghe - community interface first

FIELD_VERIFY: continuous walking / accessibility continuity / actually open routes / nighttime use

MANAGEMENT_VERIFY: access control / opening hours / shared courts / public ground floors / willingness to open / operating entity / maintenance responsibility

P11

Origin Living Commons

How does innovation enter everyday life?

Two Gates → One Seam → Courtyards → Four Interfaces

Non-AI baseline

Fixed maps + staffed help

AI augmentation

Explainable search + choice-based navigation

First action

Update Two-Gate information + repair Seam comfort

FIELD_VERIFY: continuous walking / accessibility continuity / actually open routes / nighttime use

MANAGEMENT_VERIFY: access control / opening hours / shared courts / public ground floors / willingness to open / operating entity / maintenance responsibility

P12

Slow Intelligence Urban Commons

How can AI-enabled consumption preserve human pace and choice?

Four Quadrants → Public Ground → Slow Stay → Content / Global Exchange

Non-AI baseline

Staffed help + ordinary checkout

AI augmentation

Explainable recommendations + multilingual content

First action

Begin with walking audits and opening agreements

PROVISIONAL LOCATION | PROV-KEY-003 | Issue #1029 = Open | official_anchor_status = pending | official validation geometry ≠ real design-research location

P13

Seven User Groups and Twelve Scenes

Real life problems → Non-AI baseline → AI augmentation → human fallback / exit

U01-U07

- U01 Older residents and carers
- U02 Children, students, and families
- U03 Researchers, developers, and start-up teams
- U04 Commuters, service workers, and night shifts
- U05 Heritage and international visitors
- U06 Users with different abilities and sensory needs
- U07 Businesses, community organizations, and operators

S01-S12

- | | | |
|---|-------------------------------------|----------------------------------|
| S01
Century Memory Lens | S02
Quiet Borrowed-View Path | S03
Four-Season Comfort Route |
| S04
Accessible Together | S05
Time-Equity Navigation | S06
Public-Space Steward |
| S07
Blue-Green Urban Twin | S08

Public Wellbeing Ledger |

P14

Three Tests, Public Components, and AI Landmarks

Public space first; communication image second.

P15

Four Ledgers and Four AI Admission Gates

Four Ledgers remain separate. No composite score.

Metrics, Evidence, and Uncertainty

site_area_sqm 11,412,825.386 m² | green_ratio 14.2101% | public_space_ratio 10.0829% | confidence = low
Remain unknown / null: floor_area_ratio | building_height_m | development_capacity_sqm | statutory_building_density

FIGURE 05 / BORROWED INTELLIGENCE

Metrics · Evidence · AI Governance

Design conclusions must be recomputable, traceable, verifiable, and open to revision by future evidence.

EVIDENCE CHAIN AND HUMAN GATE

FOUR LEDGERS: PARALLEL GOVERNANCE, NO AGGREGATE SCORE

FOUR AI ADMISSION GATES

REMAIN UNKNOWN / NULL

floor_area_ratio · building_height_m · development_capacity_sqm · statutory_building_density

AI does not manufacture false certainty merely to complete an answer.

Metrics are reproducible, evidence traceable, assumptions verifiable, and future evidence may overturn current judgments.

P17

Implementation and Phasing

Triggers, responsibility, verification, and stop conditions - not a government construction commitment.

Spatial assumptions → GeoJSON → Metrics → Evidence / Assumptions → FIELD_VERIFY / MANAGEMENT_VERIFY → Human Gate → Keep / Modify / Stop

P18

Global case comparison 1–2

V1.1 • Post-deadline revision • Facts and design proposals separated

C01 Kendall Square / MIT, USA

MIT’ s resource map lists campus mentoring, licensing and entrepreneurship resources alongside off-campus incubation and shared-laboratory resources. This is a directory, not evidence of collaboration outcomes.

Institution interface: campus and off-campus resource directory.

Shared facilities: LabCentral is listed; access terms were not verified.

Talent daily life: mentoring and venture support are listed; wellbeing outcomes are unproven.

Scenario access: the source supplies no public-space testing permission.

Community participation: representative public involvement is not documented here.

Failure and exit: exit agreements are not documented here.

Jing-Zhang proposal: Use AI Origin’ s two gates as a single resource foyer, with staffed directories of university services, advice and bookable facilities; providers would maintain access rules and hours.

Non-transferable: Do not copy institutional density, financing or access rights; a directory does not establish resource availability in Jing-Zhang.

MIT Innovation Initiative | CASE-MIT-KENDALL | accessed 2026-10-05

C02 one-north / LaunchPad, Singapore

JTC describes a development bringing together startups, incubators, accelerators and investors, with modular space, amenities and opportunities to pilot across its property portfolio.

Institution interface: eligibility is defined by participant type.

Shared facilities: modular units; access is not automatically free or unrestricted.

Talent daily life: food and transport information accompanies workspace information.

Scenario access: portfolio-wide piloting opportunities still require project admission.

Community participation: resident co-decision is not established by this page.

Failure and exit: flexible leases are described; test-failure rules are not documented.

Jing-Zhang proposal: Provide adaptable small work units and controlled test courts at Zhongzhiyuan, with daily services at AI Origin. The foyer would disclose booking, duration, charges and suspension terms.

Non-transferable: Do not transplant Singapore’ s rent, subsidy or eligibility regime; verify premises, fire safety, responsibilities and community acceptance locally.

JTC Corporation | CASE-JTC-LAUNCHPAD | accessed 2026-10-05

P19

Global case comparison 3–4

V1.1 • Post-deadline revision • Facts and design proposals separated

C03 Paris-Saclay, France

The public development agency presents campus development, economic activity, cultural life, IPHE business space and shared services within one coordinated development framework.

Institution interface: a public developer coordinates campus and territorial development.

Shared facilities: IPHE and shared university facilities are described.

Talent daily life: cultural life and shared mobility are included.

Scenario access: innovation services are described, without transferable blanket permission.

Community participation: the page describes development consultation with local authorities and residents.

Failure and exit: scenario-specific retirement thresholds are not documented.

Jing-Zhang proposal: Use a common issue register and coordination ledger across the Three Commons, reviewing mobility and daily services alongside research space. Agreements would define each shared interface.

Non-transferable: Do not copy the French agency’ s land powers or financing; verify existing Jing-Zhang ownership and management separately.

EPA Paris-Saclay | CASE-EPA-SACLAY | accessed 2026-10-05

C04 Toronto MaRS, Canada

MaRS combines innovation workspace, meeting and event venues, and commercialization advice, and describes adaptation of a former hospital heritage building for innovation workspace.

Institution interface: workspace connects with investor interaction and advice.

Shared facilities: meeting and event venues; eligibility and pricing require further checks.

Talent daily life: an urban work and meeting setting; universal affordability is not established.

Scenario access: this page promises no public testbed.

Community participation: resident veto rights are not established here.

Failure and exit: service-removal agreements are not documented here.

Jing-Zhang proposal: Use accessible ground floors of existing buildings in the technology-services wing for advice, display and short meetings; retain authentic interpretation at Dazhongsi and make additions removable.

Non-transferable: Do not equate adaptation with permission to alter buildings; structure, fire safety, ownership and heritage require review.

MaRS Discovery District | CASE-MARS-HUBS | accessed 2026-10-05

P20

Global case comparison 5–6

V1.1 • Post-deadline revision • Facts and design proposals separated

C05 London Knowledge Quarter, UK

KQ links academic, cultural, research and technology organisations through a partnership and publishes its governance and knowledge-exchange aims, organising proximity into an exchange network.

Institution interface: partnership, board and member representation.

Shared facilities: members hold diverse resources; membership creates no universal access right.

Talent daily life: exchange network; no living-cost outcome evidence here.

Scenario access: knowledge exchange is not permission for real-data tests.

Community participation: visitors and local users are included in aims; representation needs verification.

Failure and exit: project-stopping thresholds are not documented here.

Jing-Zhang proposal: Create a small partnership forum linking the technology-services wing and spine, with deliberation tables showing institutional resources and community issues. Membership would confer no control over public space.

Non-transferable: Partnership discussion cannot replace public procedures; member counts and brand exposure cannot substitute for public outcomes.

Knowledge Quarter London | CASE-KQ-LONDON | accessed 2026-10-05

C06 Pittsburgh / Hazelwood Green, USA

CMU describes advanced-manufacturing research in Mill 19 inside a former steel-mill shell and plans for robotics facilities, with sustainability, equity and community-opportunity aims. These aims are not verified outcomes.

Institution interface: university, manufacturing research and industry collaboration.

Shared facilities: research infrastructure; public-access terms were not verified.

Talent daily life: housing and daily convenience are not quantified here.

Scenario access: translational research space, without blanket public-testing rights.

Community participation: equitable opportunity is an aim; implementation representation is unverified.

Failure and exit: project-specific exit rules are not supplied.

Jing-Zhang proposal: Separate research cores, controlled test courts and public observation at Zhongzhiyuan. Prefer adaptation where existing premises permit it, starting T1/T2 with small removable components.

Non-transferable: This is not geographical evidence for Robotics Row: this revision narrows the case to sourced Hazelwood evidence, without copying investment or land arrangements.

Carnegie Mellon University Robotics Institute | CASE-CMU-HAZELWOOD | accessed 2026-10-05

P21

Two-way regional interfaces

V1.1 • Post-deadline revision • Facts and design proposals separated

Regional coordination follows two-way issue transfer, method/resource return, local validation and feedback. It introduces no confirmed partners, allocations or investment commitments. Public information supports background roles only; every interface below is a participant proposal pending negotiation. Existing regional cooperation does not authorise this project.

R01 AI Beiwei Community — Candidate interface for developer issues, open exchange and young ventures

Two-way interface: Send S11 resource needs and S09 test issues; receive mentor referrals, tool documentation and review feedback

Carrier: AI Origin gates + technology-services wing

Prospective responsibility: Community operator, foyer and university teams would negotiate

Exit condition: Share only consented project summaries; stop referrals when resources or willingness are absent

R02 Future Science City — Candidate interface for energy and advanced-manufacturing questions and methods

Two-way interface: Send S03/S07 climate and low-energy service issues; receive expert feedback, methods and constraints

Carrier: Zhongzhiyuan T1/T2 + Xiaoyue scenario wing

Prospective responsibility: Research liaison, test operator and professional reviewer would negotiate

Exit condition: Promise no equipment or compute; fall back to manual inspection when methods do not fit

R03 Huairou Science City — Candidate interface for measurement, scientific methods and basic-research exchange

Two-way interface: Send S07 observation issues and T1 validation needs; receive protocol advice, exchange and uncertainty explanations

Carrier: Zhongzhiyuan test courts + civic forum

Prospective responsibility: Research-facility manager, test operator and independent reviewer would negotiate

Exit condition: Confirm booking and permission separately; do not imply immediate access to major scientific facilities

P22

Two-way regional interfaces

V1.1 • Post-deadline revision • Facts and design proposals separated

Regional coordination follows two-way issue transfer, method/resource return, local validation and feedback. It introduces no confirmed partners, allocations or investment commitments. Public information supports background roles only; every interface below is a participant proposal pending negotiation. Existing regional cooperation does not authorise this project.

R04 Beijing E-Town — Candidate interface for engineering validation, productisation and supply chains

Two-way interface: Send provisionally validated T1/T3 components and failure records; receive engineering advice, supply terms and service boundaries

Carrier: Zhongzhiyuan controlled tests + Dazhongsi content and retail interfaces

Prospective responsibility: Technology firms, scenario operators and service managers would negotiate

Exit condition: Validation is not procurement; no scaling without maintenance and restoration responsibility

R05 Beijing–Tianjin–Hebei network — Candidate interface for external method review, talent exchange and cross-city feedback

Two-way interface: Send de-identified scenario cards, ledger definitions and exit cases; receive review reports, adaptation differences and training feedback

Carrier: Belt-wide issue library + services-wing exchange + Three Commons

Prospective responsibility: Willing universities, city teams and community representatives would negotiate

Exit condition: Require fresh local admission; no personal-trajectory transfer or claims of existing cooperation

Regional interfaces: send issues, return evidence

Participant concept • No confirmed partners, resources or permissions • Not a geographic map

V1.1 • visual/assets/ecosystem-review.json • sources.json • 2026-10-05

P23

Eight-element industry support 1–4

V1.1 • Post-deadline revision • Facts and design proposals separated

E01 Land

Supply: Negotiate time-limited use and access boundaries with owners and managers before considering construction

Carrier: Public ground floors and bookable courts in the Three Commons

Responsibility: Owner/manager + neighbourhood + scenario operator

Admission/exit: Written permission, fire safety and maintenance; withdrawal stops the pilot and triggers restoration

Future indicators: Verified authorised slots, conflict records and completed restoration

E03 Industry

Supply: Issue intake, controlled validation, public/commercial triage and transfer referrals

Carrier: Services-wing S11 → Zhongzhiyuan T1/T2 → Dazhongsi T3

Responsibility: University/business teams + service organisations + independent reviewers

Admission/exit: Define problem and responsibility first; no public deployment without all four gates

Future indicators: Evidence-backed validation cycles and correction/exit records, not recruitment totals

E02 Space

Supply: Separate public observation, booked collaboration and controlled research; retain low-tech services

Carrier: Zhongzhiyuan courts; AI Origin four interfaces; Dazhongsi public ground floors

Responsibility: Building/fire professionals + property manager + community

Admission/exit: Verify continuous access, evacuation and hours; reduce access levels when checks fail

Future indicators: Ability-specific route audits, actual opening hours and repair records

E04 Capital

Supply: Account separately for basic public services and AI trials; seek resources by stage

Carrier: Belt-wide low-tech baseline + Three Commons pilot ledgers

Responsibility: Prospective funder + operator + independent financial reviewer

Admission/exit: Confirm budget, upkeep, insurance and exit costs; inadequate funding stops AI while retaining basic service

Future indicators: Budget provenance and execution, upkeep coverage and removal cost; amounts pending estimation

P24

Eight-element industry support 5–8

V1.1 • Post-deadline revision • Facts and design proposals separated

E05 Talent

Supply: Mentor referrals, youth prototyping and compensated review by users with varied abilities

Carrier: AI Origin foyer and deliberation tables + services wing

Responsibility: University teams + community + service organisations

Admission/exit: Voluntary participation, exit and no digital barrier; shorten or pause burdensome activities

Future indicators: Group-specific opportunities, response time, participant burden and feedback

E07 Data

Supply: Public catalogues, minimal collection, aggregate publication and versioned correction

Carrier: Four Ledgers + S06/S07/S12; research raw data has separate permissions

Responsibility: Data controller + scenario operator + public review representatives

Admission/exit: Confirm purpose, rights and retention first; incidents stop collection and trigger agreed deletion

Future indicators: Traceable-record share, correction response and deletion confirmation; no public personal trajectories

E06 Compute

Supply: Prefer edge/offline operation for low-risk services; bookable research compute remains a candidate

Carrier: Zhongzhiyuan T1 + offline gate terminals

Responsibility: Device/compute provider + operator + safety reviewer

Admission/exit: Confirm capacity, power, network and human takeover; faults revert to fixed information

Future indicators: Offline completion, recovery time, energy and faults; no promised allocation

E08 Scenarios

Supply: Twelve Scenario issue cards → T1/T2/T3 tests → deliberation → keep/modify/stop

Carrier: Spine and Xiaoyue wing define issues; Three Commons test and use services

Responsibility: Community issue intake + technology validation + manager admission

Admission/exit: Pass all four gates; false access, discrimination or absent takeover pauses the service

Future indicators: Low-tech availability, group-specific task completion, appeals and exit drills

P25

Innovation supply and feedback map

V1.1 • Post-deadline revision • Facts and design proposals separated

Eight elements: supply, validation, feedback and exit

Participant concept • No confirmed partners, resources or permissions • Not a geographic map

Land

Negotiate time-limited use and access boundaries with owners and managers before considering construction

Space

Separate public observation, booked collaboration and controlled research; retain low-tech services

Industry

Issue intake, controlled validation, public/commercial triage and transfer referrals

Capital

Account separately for basic public services and AI trials; seek resources by stage

Talent

Mentor referrals, youth prototyping and compensated review by users with varied abilities

Compute

Prefer edge/offline operation for low-risk services; bookable research compute remains a candidate

Data

Public catalogues, minimal collection, aggregate publication and versioned correction

Scenarios

Twelve Scenario issue cards → T1/T2/T3 tests → deliberation → keep/modify/stop

Resource supply → Risk-based validation → Four Ledgers feedback → Provider adjustment

Zhongzhiyuan

Controlled tests / Human review

AI Origin

Everyday use / Public deliberation

Dazhongsi

Retail and content / Transparent choice

Exit: withdrawn permission, false access, discrimination, absent takeover or upkeep → Stop AI, restore low-tech service, record reason

V1.1 • visual/assets/ecosystem-review.json • sources.json • 2026-10-05

Each of the eight elements requires a spatial carrier, prospective responsibility and exit rules. Land and space govern admission; industry and talent organise collaboration; capital and compute constrain operation; data and scenarios provide feedback. All actors are suggested roles, with no confirmed funding, quotas or policy support. Indicators below are future verification items requiring baselines, not achieved performance.

P26

Twelve Scenarios and validation paths

V1.1 • Post-deadline revision • Facts and design proposals separated

S01 Century Memory Lens	U01, U02, U05; Spine and AI Origin / Authentic remains, a timeline, printed maps, and human interpretation / Multilingual, accessible, and personalized interpretation; sources stay visible and generated content cannot replace historical review.
S02 Quiet Borrowed-View Path	U01, U04, U06; Spine and Everyday-Life Seam / Continuous signs, a quiet alternative route, seating, and shade / Suggest routes by noise, crowding, and sensory preference; users can disable location and use a fixed map.
S03 Four-Season Comfort Route	All users; Spine and Three Commons / Shade, rain cover, drinking water, rest points, and seasonal maintenance / Suggest comfortable routes using microclimate information; fixed signs and human inspection take over when equipment fails.
S04 Accessible Together	U01, U06; six stitches and Two Gates / Ramps, tactile and high-contrast information, continuous rest, and human assistance / Help detect obstacles and suggest accessible routes; prediction must not be presented as verified accessibility.
S05 Time-Equity Navigation	U01, U04, U06; stations and Dazhongsi / Standard maps, service times, staffed information, and route options / Show walking, waiting, detour, and care costs; users may choose fastest, most reliable, or least-transfer routes.
S06 Public-Space Steward	U07 and all users; Spine and Three Commons / Inspection sheets, cleaning and repair requests, notices, and a staffed hotline / Aggregate facility status and work orders, with human confirmation of exceptions; no default facial recognition.
S07 Blue-Green Urban Twin	U02, U03, U07; Zhongzhiyuan and river links / Rain gauges, planting information, human monitoring, and evacuation rules / Assist observation of ponding, heat, and plant condition; models support maintenance judgement but do not replace engineering conclusions.
S08 Community Deliberation Agent	U01, U02, U06, U07; AI Origin courtyards / In-person meetings, paper comments, human facilitation, and public minutes / Assist synthesis without replacing voting; provide correction, appeal, deletion, and version records.
S09 Open Validation Booking	U03, U07, and the public; Zhongzhiyuan / On-site notices, paper applications, and human safety briefings / Match time and capability and disclose risk and results; refusal of data does not affect offline application.
S10 Slow-Intelligence Retail Assistant	U04, U05, U06, U07; Dazhongsi / Ordinary menus, cash and standard checkout, staffed advice, and clear prices / Explain recommendations, allergens, and commercial relationships; personalization can be disabled and must not enable profile-based price discrimination.
S11 Innovation Resource Foyer	U03, U07, and communities; AI Origin Two Gates / Service directories, fixed opening hours, and human referrals / Assist matching with spaces, mentors, and professional services; make no outcome promise and route sensitive requests to people.
S12 Public Wellbeing Ledger	All users; Three Commons and overall gateways / Periodic disclosure, printed reports, hearings, and complaint channels / Display only aggregate metrics, sources, and uncertainty; never reveal individual traces or hide trade-offs in a total score.

T1 edge services / T2 accessibility and operations / T3 retail and content: pilot only after all four admission gates pass.

P27

Deliverable version and repair mapping

V1.1 • Post-deadline revision • Facts and design proposals separated

01 Case research: six primary-source cases, six identical comparison axes, transfer conditions and undocumented aspects.

02 Regional interfaces: five two-way links and exit conditions covering Beiwei, Future Science City, Huairou, E-Town and Beijing–Tianjin–Hebei.

03 Industry support: land, space, industry, capital, talent, compute, data and scenarios, with responsibility, carriers and future indicators.

04 Readability: bundled open Chinese font, English figure paths and canonical scenario names; full prose is in the bilingual offline report.

05 Status: post-deadline revision dated 2026-10-05, not accepted, selected or approved for implementation. Acceptance remains a maintainer decision.

06 Evidence boundary: provisional geometry and metrics are unchanged; field, management, funding, resources and cooperation require verification. Diagrams prove neither geographical links nor permissions.

Real AI innovation is not an algorithm showroom. It makes Jing-Zhang civic infrastructure that can be remembered, repaired, cared for, and deliberated together.

Memory calibrates intelligence. Wellbeing measures the future.
